Project Abstract

The Agile Track System is a React-based application designed to streamline agile workflows, improve task management, and enhance team collaboration in a software development environment.

Key Features:

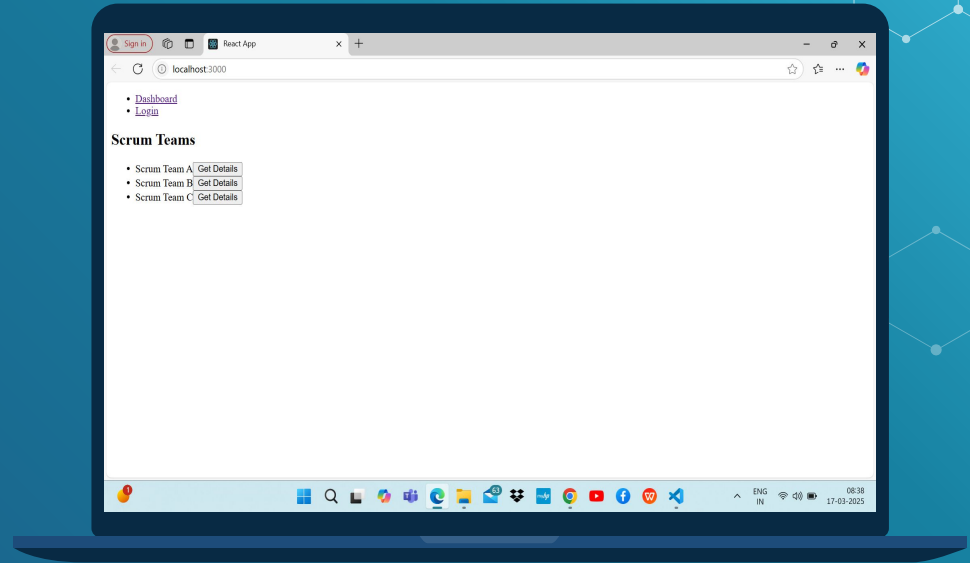

1. User Management
2. Task Tracking & Scrum Management
3. Collaboration & Productivity Enhancement
4. Analytics & Insights

Problem Statement:-

The "Agile Track System" is a Single Page Application (SPA) designed to streamline task management and team collaboration within agile frameworks. This platform allows users and administrators to log in, view tasks assigned to users, and track progress across various scrum teams.

How the Browser Works?

Let's see the functionality of the code.....

Thanks!
